

FRAXEL FTX / DUAL

Study for Photodamaged Skin

If you are between 50-70 years old and are bothered by photodamaged skin, you may be eligible to participate in a research study using FDA-cleared laser devices designed to address signs of photodamage on the face.

Are you Eligible?

- Fitzpatrick Skin Type I-IV
- Ages 50-70 years old
- Must be rated minimum score of 2 on the scale shown below
- Must not have a compromised ability for wound healing
- Must not have had injectable soft tissue fillers within the last 9 months in the treatment area
- Must not have had neuromodulator injections within the past 3 months within the treatment area
- For full eligibility, a pre-screen is required. Call or email for details.

Study Requirements

- Study lasts around 4 months and involves 5 visits
- Each half of the face will be treated with a fractional laser device totaling one full face fractional laser treatment performed
- Clinical photographs will be taken at each visit
- Will undergo two biopsies pre and post treatment from inconspicuous facial areas.
- Additional pre and post procedure guidelines will be discussed at screening

Photographic Examples

Score 2

Appearance of lines around mouth and eyes, early brown 'age spots'

Score 3

Clear signs of brown pigmentation, small blood vessels, wrinkles present

Score 4

Yellow-gray skin color, numerous wrinkles, brown pigmentation, and 'age spots'
